NOTICE

The Subject Index for Volume 192 will appear as part of a cumulative index for the year 1993.

Information for Contributors

BIOCHEMICAL AND BIOPHYSICAL RESEARCH COMMUNICATIONS is devoted to the rapid dissemination of timely and significant observations in the diverse fields of modern experimental biology. Manuscripts submitted should be so written as to emphasize clearly the novel aspects of the information reported.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been submitted to another Editor of this journal, that it has not been published, and that it is not under consideration for publication elsewhere; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. The manuscript must be accompanied by copies of all preliminary communications and of all relevant manuscripts that are in press or are under editorial consideration by another journal. Articles and any other material published in BIOCHEMICAL AND BIOPHYSICAL RESEARCH COMMUNICATIONS represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Prior to submission for publication, the manuscript must be approved by all of the authors and by the institution where the work was carried out.

Manuscripts in duplicate may be sent to any one of the editors whose names and addresses are listed on the inside front cover. To assist us in ensuring rapid processing of your article, please submit a signed photocopy of the copyright assignment form which appears as page 4 of this "Information" along with your manuscript. (This form will not be binding if your manuscript is not accepted for publication in BBRC.) Also include a typed self-addressed label for the corresponding author. *In the case of rejected manuscripts only one copy of the manuscript will be returned to the author.*

Preparation of Manuscripts

To ensure rapid and accurate publication, it is essential that manuscripts conform to the instructions which follow. Manuscripts which are not in accordance with these specifications may be returned.

Article length should not exceed 5 typewritten pages, using one-and-a-half (1½) spacing (W spacing) and 12-point (minimum) type on 8.5 × 11-in. high-quality paper (the complete manuscript, including space occupied by figures and tables, should not exceed 8 pages).

Page Numbers and Headings. Page numbers should be typed at the top of the page.

The title of the paper should be typed in capital letters near the top of the first page, with the name(s) and affiliation(s) of the author(s) typed just below. Headings within the article should be arranged according to their relative importance.

Summary. Each article must be preceded by a brief summary, typed single-spaced, not exceeding 10 lines (approximately 100–150 words). This paragraph should adequately summarize the pertinent findings of the paper.

At the bottom of this page, include the telephone and fax numbers of the corresponding author.

Typing. **Articles are reproduced directly from the submitted manuscript as camera-ready copy.** Manuscripts must therefore be generated on good quality white bond paper. Manuscripts generated as word-processor or computer printouts are acceptable only if they are of "letter quality." Manuscripts generated by dot-matrix printers are *not* acceptable and will be returned to authors. For typewritten manuscripts a black silk or carbon typewriter ribbon should be used. Special care should be taken to ensure a sharp clean impression of letters throughout. Use of an electric typewriter is

strongly recommended. Erasures should be avoided. Care must also be taken to avoid errors in spelling, word division, and punctuation. **No changes may be made in manuscripts after acceptance.**

Manuscripts should be 1½-spaced on one side of the sheet: **only methods, references, footnotes, tables, and figure legends should be single-spaced.** Typing area of the page must not be larger than 6.5 in. wide and 9.5 in. long using 12-point (minimum) type.

Abbreviations and Symbols listed in Tables I, VIII, and XI of the Instructions to Authors of **Archives of Biochemistry and Biophysics** (1993, **300**, xiii–xxviii), and those so indicated in the other tables, may be used without definition. Reprints of the Instructions to Authors are available from the Publisher. Use of all other abbreviations and symbols is to be avoided. When abbreviations are essential, they should be consistent with the form and style of the above document and **must be defined in a single footnote and typed on a separate page**, rather than in the text. Such abbreviations **must not** be used in the Summary.

Enzyme names should not be abbreviated except when the substrate has an approved abbreviation (e.g., ATPase). Use the Enzyme Commission ("EC") code number when available.

Isotopes should be styled following the recommendations of the IUBMB Commission of Editors of Biochemical Journals. The symbol of the isotope introduced should be placed in square brackets directly attached to the front of the name (e.g., [³²P]CMP). Note that the isotope number should only be used as a (superior) prefix to the atomic symbol, not to an abbreviation.

Submission of data to protein or genetic databases. The Editors of this Journal encourage the use of databases as repositories for detailed data on protein structure (e.g., x-ray crystallographic coordinates) and on DNA sequences and mapping assignments. Authors are requested to complete data entry and annotation forms (which can be obtained in advance from the Journal Editorial Office or from the databases) and to submit these summaries and database entries (in floppy disk, tape, or hardcopy form) to the database prior to or within one week after submission of the manuscript. This will assure that mapping or sequencing work can be accessed by data retrieval methods. Copies of the data entry forms or other verification of submission and, when available, pertinent accession numbers should be provided with the submitted manuscripts. When this information has been supplied by the authors, published articles will include a footnote indicating the database to which data have been provided and the accession number.

In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

For further information regarding nomenclature authors are advised to consult the Instructions to Authors of **Archives of Biochemistry and Biophysics** (1993) **300**, xiii–xxviii.

Footnotes, references, tables, and figure legends should be typed single-spaced on separate pages.

Illustrations and Tables. **Do not attempt to insert figures, figure legends, or tables into the text.** This will be done by the Publisher.

All drawings should be clearly labeled in black ink in a manner suitable for direct reproduction (Leroy lettering size 120 or 140). Do not use press-on lettering; typewritten lettering is not acceptable.

Figures will be reduced to fit within the type area of the page (approximately 5 × 8 in.); the original drawings should be no larger than 8.5 × 11 in.

Glossy photographs of drawings are acceptable provided they are sharp, clear prints with an even *black* density. Illustrations in color can be accepted only if the authors defray the cost.

Mathematical or chemical symbols that cannot be typed should be inked in carefully in black. Structural formulas should be drawn in black ink.

Illustrations and tables should be submitted on separate sheets.

References to the literature should be cited by the number in parentheses in the text and listed in numerical order in a single-spaced typed list placed at the end of the manuscript. Abbreviations of journals should conform to those of *Chemical Abstracts Service Source Index*, 1985. Note the following examples.

1. Graan, T., and Ort, D.R. (1986) Arch. Biochem. Biophys. 248, 445–451.
2. Metzler, D. E. (1977) Biochemistry: The Chemical Reaction of Living Cells, p. 298. Academic Press, New York.
3. Rosenfeld, R. G., and Hintz, R. L. (1986) In The Receptors (P. M. Conn, Ed.), Vol. III, pp. 281–329. Academic Press, Orlando, FL.

Note that inclusive pagination must be given.

Acknowledgment of Receipt. Authors desiring acknowledgment of manuscript should enclose a stamped self-addressed card.

Reprints. Reprint order forms, with price lists, are sent to the authors immediately upon acceptance of their manuscript.
